China Biotech's Global Positioning From JPM 2026

Insight Corner

Month: February 2026

Presenter: Prashant Sharma | Himanshu Sehgal

Content

- JPM 2026 Spotlight 04
- China Biotech’s & JPM: Key Connections 08
- China Biotech in Global Arena 14
- About the Company 31

- Highlights from AACR-25 (May ,26)
- US Tariff impact on Pharma industries (Jun, 25)
- EULAR-25: Key insights of Psoriatic Arthritis (Jul, 25)
- Antibody Drug Conjugate: The next big investment in Oncology (Aug, 25)
- Animal Health (Oct, 25)
- Obesity deep dive (Nov, 25)
- GLP-1 and GIP (Dec, 25)
- Hematological Highlights from ASH 2025 (Jan, 26)

Additional: 1 Beautiful Bill

JPM 2026 Spotlight

OCTAVUS CONSULTING
Data.Insights.Decisions.

INSIGHT CORNER

JPM 2026: Standout Moments

1

- At JPM 2026, 24 Chinese companies were on stage across broad therapeutic areas, with oncology, metabolic disease and cell/gene therapy emerging as key focus themes for global partners such as
  - In oncology, RemeGen & AbbVie's RC148 and in metabolic diseases, Hansoh's GLP-1/GIP asset olatorepatide, partnered with Regeneron

- ADCs were a major focus at JPM 2026, with many companies treating them as the next backbone treatment for solid and blood cancers and shifting from single ADC drugs to broad platforms (e.g., Hengrui's AXC, Kelun's OptiDC, CytomX's PROBODY)
  - A trend reflected in Corbus CRB-701, which aims to be a safer, longer-lasting, and easier-to-use next-generation ADC versus current options like PADCEV

2

3

- CAR-T was less broad but very strategic at JPM 2026, with attention on deepening data in multiple myeloma, first commercial moves in autoimmune disease, and next-gen platform work as in case with
  - Kyverna's next frontier CAR-T growth in autoimmune disease, KYV-101 nearing first approval in stiff person syndrome, a condition with no approved therapies today and significant unmet need

- At JPM 2026, weight-loss drugs stayed a top story, but the focus shifted from "who has one" to "whose works best and lasts longest" with
  - Novo backing CagriSema, which is currently being reviewed by the FDA, and Wave Life Sciences WVE-007, an obesity treatment given once or twice a year

4

5

- Bispecific antibodies have clearly moved from early experiments to real products and late-stage oncology trials, especially drugs that hit PD-1/PD-L1+ VEGF, engage T cells via CD3, or modulate the immune system in new ways such as
  - Summit Therapeutics Ivonescimab being tested head-to-head against standard KEYTRUDA-based regimens in lung cancer

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

JPM 2026: Highlights (1/2)

Major Highlights

Roche plans to maintain strong growth through its 17 top-selling medicines across multiple therapeutic areas, while advancing up to 19 new drugs expected to launch by 2030, with regulatory filings for up to three new medicines planned for 2026

Wave Life Sciences positioned WVE-007 as a differentiated obesity treatment focused on fat loss with muscle preservation stressing potential once-or-twice yearly dosing with fat loss like GLP-1 at 3 months

Sanofi anticipates a wave of regulatory decisions, submissions, and Phase 2/3 clinical trial readouts across its portfolio throughout 2026 and 2027

Merck outlined strong late-stage portfolio momentum, with ~80 ongoing Phase 3 trials, >20 anticipated launches, key cross-therapeutic approvals, new Phase 3 initiations in oncology and infectious diseases, and a robust slate of pivotal readouts extending into 2026–27

BMS is driving a wave of 10+ new product launches by 2030, supported by 13 NME registrational readouts and 14 LCM pivotal readouts expected from 2026 onwards

In CAR-T space **Kyverna** is aiming to file BLA in SPS in 1H'26 for Miv-cel with a potential launch by 2026 and anticipated updates in SPS, MG other TA throughout 2026

CRISPR Therapeutics highlights CASGEVY generated over $100 million in revenue in 2025 and is expected to expand to younger patients in early 2026 while also anticipating updates across its *in-vivo*, CAR-T and heme programs throughout 2026

Argenx achieved profitability in 2025 with $4.2B in product sales and is aiming for major growth by 2030 by targeting 10 approved uses for its drugs, 5 new late-stage treatments and 6 key clinical trial results in next 2 years

UCB highlights strong growth engine driving innovation across five key products protected by patents until 2033–2037, while its Kygevvi becomes first and only approved treatment for Thymidine Kinase 2 deficiency (TK2D)

Abbreviations: SPS – Stiff Person Syndrome | TA – Therapeutic Area | MG – Myasthenia Gravis | BLA – Biologics License Application | NME - New Molecular Entities

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

JPM 2026: Highlights (2/2)

Expected Late Stage/Readouts

Novartis looks forward to 9 Phase 3 readouts in oncology, neuroscience, 7 Phase 3 readouts in immunology, CRM by 2030 with 15+ potentially submission-enabling readouts in the next 2 years

Pfizer plans to initiate 20+ pivotal Phase 3 studies in 2026 alone with a significant portion of this effort (10 Phase 3 studies) will be driven by the Metsera portfolio, specifically the ultra-long-acting GLP-1 program

Biogen anticipates topline data from its dual Phase 3 program for litifilimab in systemic lupus erythematosus, with readouts expected from both TOPAZ-1 and TOPAZ-2 by year-end 2026

Xenon awaits Phase 3 X-TOLE2 topline data in focal onset seizures in March 2026, with an NDA submission planned for the 2nd half of 2026, while Phase 3 X-NOVA2 results in major depressive disorder are anticipated in the 1st half of 2027

AstraZeneca expects 20+ Phase 3 readouts throughout 2026 with next wave of growth beyond 2030 that includes 3 Phase 3 trials ongoing with laroprovstat in weight management and CV risk factors, sone-vedo in ADCs and Radioconjugates, 14 Phase 3 trials with rilvegostomig and volrustomig in Next-gen IO bispecific, surovatamig in Cell therapy and T-cell engagers

Upcoming Approvals 2026

8 Feb 2026	REGENXBIO (RGX-121) MPS II
21 Feb 2026	Vanda (Bysanti) Bipolar Disorder, Schizophrenia
28 Feb 2026	BioMarin (PALYNZIQ) PKU (aged 12-17)
10 Apr 2026	Replimune (RP1) advanced Melanoma
18 Sep 2026	Nuvalent (zidesamtinib) ROS1+ve NSCLC

Abbreviations: MPS II - Mucopolysaccharidosis II | PKU - Phenylketonuria

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

China Biotech's & JPM: Key Connections

OCTAVUS CONSULTING
Data.Insights.Decisions.

INSIGHT CORNER

JPM 2026: China Highlights

Chinese Champions

- **Jiangsu Hengrui Pharmaceuticals** is delivering impressive results, backed by a strong pipeline that anticipates over **10 approvals**, **20+ NDA/BLA submissions**, and **25+ P3 data readouts** from 2026 onward and expecting **>25% YoY revenue growth** from innovative drugs
- **Kelun-Biotech** is emerging as a global ADC leader in China with its TROP2 ADC Sac-TMT (approved in TNBC and EGFR-mutant NSCLC by NMPA) and partnered with MSD in ongoing **16 global P3 clinical studies**
- **Zai Lab** is advancing its dual-engine model, using its China commercial base and global R&D to develop DLL3 ADC Zoci, now in pivotal trials (aiming for potential best-in-class DLL3 ADC) and **submission in US under accelerated approval designation** for the treatment of **SCLC in 2027**, while broadening its pipeline with **2 new INDs in 2025** and **>9 planned indications by 2030**
- Ascentage is advancing lisaftoclax combined with azacitidine in a global Phase 3 trial (GLORA-4) for first-line high-risk MDS, aiming to become the first approved Bcl-2 inhibitor in this indication

Major Milestones

- Hengrui's P3 late-stage data readouts for NMEs like HRS9531, HRS-7535, SHR-2004, SHR-A1811 and multiple others are expected in 2026 and early 2027
- Kelun-Biotech anticipates readouts from sac-TMT P3 trials across multiple tumors, and A166 (HER2 ADC) showed no on-treatment deaths in P3 results
- Zai Lab expects Zoci approval for 2L/3L SCLC by 2028 (accelerated designation), ZL-1503 first-in-human data for atopic dermatitis in 2H'26, and updates on ZL-1222, ZL-1311 IND, and ZL-6201 in 2026

Deals and Partnerships

- Hengrui's once-weekly dual GLP-1/GIP agonist HRS-9531 (ribupatide/KAI-9531) has positive P2&3 obesity data in China and is now in a global P3 program led by Kailera, illustrating how a China-originated drug is entering the worldwide GLP-1 market alongside benchmark players Novo Nordisk and Eli Lilly; it has also out-licensed ex-China rights of HRS-7535, HRS9531, HRS-4729 to Kailera
- Zonsen PepLib Biotech has signed a global licensing agreement with Novartis for an undisclosed peptide-based radioligand therapy (RLT) asset, receiving an upfront payment of $50 million

JPM Takeaways

- 24 Chinese biopharma companies presented at JPM 2026, highlighting their shift to mainstream global stage with focus on Asia-Pacific sessions
- Chinese biopharma firms showcased robust pipelines in ADCs, metabolic therapies, cell/gene treatments, and bispecific antibodies, capitalizing on China's rapid and low-cost clinical trials to draw global investor interest
- Shorter timelines, reduced costs, and expertise in RNAi, oncology, and innovative modalities attracted US/European partnerships, solidifying the maturity of China's biopharma ecosystem

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

How JPM is invested in China

JP Morgan's Presence in China

- JPM has been operating in China since 1921 and maintains a fully owned local entity to provide onshore banking and financing services to China biotech

Access to JP Morgan's San Francisco Healthcare Conference

JPM Conference in San Francisco is strictly invite-only, with Chinese biotech firms gaining access primarily through established relationships with JPM bankers, proven global traction, and strategic relevance to investor interests. Key Factors include:

- ✓ Publicly listed status (e.g., HKEX, NASDAQ) or late-stage private firms (Zai, Shanghai Henlius Biotech, Ascentage)
- ✓ Proven ex-China milestones like US FDA/EMA approvals, INDs or prior licensing deals with western majors
  - BeiGene (BRUKINSA, TEVIMBRA US FDA approvals); Zai Lab (US FDA ODD for ZL-1310)
- ✓ Engagement with JPM healthcare investment banking team via prior mandates (ECM, M&A advisory) or coverage by JPM sell-side analysts.
  - Innovent Biologics and Akeso feature prominently in JPM research coverage with both frequently assigned 'Overweight' ratings and active target price updates

Deep Financial Ties

JP Morgan is an active funder and has been supporting Chinese biotech firms such as WuXi Biologics, Innovent, and Akeso, with stakes often exceeding the ***5% disclosure threshold***

Linking China Biotech's with Global Healthcare

JP Morgan has been hosting ***Global Healthcare Shanghai Conference*** *for the past five years connecting China with the global healthcare sectors*

INSIGHT CORNER

China Biotech presence at JPM – Why?

China biotech's participation in JPM conference strategically enabled global validation and capital access while increasing China's visibility and influence in global ecosystem

Global Recognition

Highlight their shift from being a **manufacturing hub to innovation leadership**

Being on JPM agenda is a signalling mechanism globally that they have innovation, governance and realistic globalisation strategy, which feeds directly into valuation and follow-on financing

E.g. Innovent Biologics uses JPM as a platform to highlight its expanding innovative pipeline globally, signalling evolution beyond biosimilars

Innovation Capabilities

JPM validates Chinese innovation for Western VCs and big pharma, who are in-licensing de-risked clinical assets

The conference provided an unparalleled platform to demonstrate cutting-edge breakthroughs in **ADCs, bispecific antibodies, and cell/gene therapies**

E.g. Antengene's "2+1" AnTenGager™ platform designed to reduce CRS and enhance efficacy

Capital Access

JPM concentrates on big pharma BD, crossover/hedge funds and specialist VCs in one place making it most **efficient time of year for China biotech's to make strategic announcements, BD meetings and other investor related activities**

E.g. Novartis- SciNeuro deal for ~USD 1.6B
Abbvie-Simcere Zaiming deal for ~USD 1.05B

Strategic Impact

Presence at JPM signals **alignment with global investor priorities, long-term scalability and facilitates integration into global R&D networks**

For e.g., BeiGene has become one of the China's most globally integrated biotech company. Its BTK inhibitor, Brukinsa (Zanubrutinib) secured US FDA approval and competes directly in global markets

High Value Licensing deals

To counteract patent cliffs, western companies are increasingly licensing assets from China which accounted for almost **1/3rd of the global out-licensing spend** in 2025 with 60+ China-Western deals

Major 2025 in-licensing deals include MSD-Kelun Biotech, Regeneron-Hansoh, and Takeda-Innovent in-licensing deals for pipeline

AbbVie-RemeGen Bispecific for TDV ~USD 5.6B at JPM 2026

INSIGHT CORNER

China Biotech's Highlighted at JPM 2026

- 中國生物製藥有限公司 SINO BIOPHARMACEUTICAL LIMITED

CRO/CDMO

- WuXi Biologics Global Solution Provider
- 药明康德 WuXi AppTec
- Tigermed

INSIGHT CORNER

China Biotech's Outlook in the Global Arena

China's biotech sector is emerging from being a manufacturing hub to innovation powerhouse impacting therapeutic priorities and dealmaking dynamics

Although geopolitical hurdles and regulatory scrutiny present certain risks, the rapid pace of innovation, expanding biologics development, and growing global partnerships position China-originated drugs for significant international growth in the coming years

01

Out-licensing Deals beyond 2026

China's out-licensing deals in biotech sector are expected to **rise** in 2026 and beyond, driven by growing **international interest in Chinese innovations and recognition of its R&D capabilities**

02

Market Disruption

Evolving China Biotech firms are **challenging the established markets in the US** causing homegrown disruption. E.g. Ascentage Pharma's Lisaftoclax challenges the existing market position of venetoclax (world's first approved Bcl-2 inhibitor)

03

Navigating Geopolitical Headwinds

Geopolitical hurdles with policies like BIOSECURE act remains a key variable in advancing China's biotech sector and integration with global industry **fostering uncertainty**

04

Surge in Revenue and FDA approvals

Morgan Stanley Research projects annual revenue from **China-originated drugs reaching $34 billion by 2030 and $220 billion by 2040**. These drugs are expected to comprise **35% of US FDA approvals by 2040**, up sharply from the current 5%

INSIGHT CORNER

The Rise of China Biotech Industry: Success Story (1/2)

Historical Overview

- Before 21st century, China drug industry was dominated by traditional medicines, imports & low-cost generics. Then, about a decade ago, government began a coordinated effort to drive pharmaceutical innovation for the development of NCEs, antibodies, ADCs, vaccines, personalized medicines, etc.
- The 11th (2006–2010) and 12th (2011–2015) FYPs aimed to improve the QoL for Chinese citizens by strengthening environmental protection & social welfare, with a focus on promoting domestic innovation rather than global engagement. Subsequently, the 12th and 13th FYPs shifted their focus toward advancing China's biotechnology innovation on a global scale, targeting collaboration and competitiveness in markets such as US & EU

2016-2018

- Over the next 5 yrs, 13th FYP (2016-2020) expands on the12th FYP, focus on innovation & continues the 11th FYP efforts to improve QoL through environmental, health, education, & social welfare initiatives
  - **Innovation:** Innovation is pillar to China 13th FYP, aimed at upgrading manufacturing, boosting global competitiveness including US & EU, and strengthening technological leadership
  - **Coordinated development:** Chinese government aims to strengthen regional inter-governmental coordination of policies, resources & urban planning through urbanization
  - **Openness:** 13th FYP aims to expand exports & targeted imports, boost inbound and outbound investment, promote international use of RMB, & strengthen China role in global economic governance
- In **2017,** China NMPA joined the ICH as eighth regulatory member, NMPA plans to speed up foreign drug entry into Chinese market and export of Chinese drugs to the ROW while supporting global competitiveness
- **In June 2018,** China NMPA was elected to the ICH Management Committee, allowing China to continue its involvement in international drug development & registration

To be continued….

2019-2021

- China out-licensing deals increased from 15 in **2019** to 33 in **2023,** with oncology representing greatest share, nearly 4x rise from 7 out-licensing deals in **2019** to 27 in **2023**
- In the next 6 yrs, 14th FYP (2021–2025) for foreign capital utilization indicates that China will further open up to foreign investment by reducing the negative list & simplifying regulations for foreign-funded enterprises, major initiatives of this plan includes:-
  - Further reduce the negative list that restricts foreign investment
  - Expand access for foreign investors in the healthcare
  - Promote greater foreign investment in R&D, new materials, biomedicine, and related sectors
  - Strengthen IP protections & ensure foreign companies have equal access to government procurement & project bidding
- In **2019,** WuXi Biologics, first Chinese biologics maker, received EMA GMP certification for producing TROGARZO (Ibalizumab-uiyk). The company also highlights its world-class facilities that allow simultaneous development & registration of innovative biologics & biosimilars for both China and international markets, including US and EU
- In **2020,** China's first independently developed Trastuzumab for HER2-positive breast cancer got approval in both China (HANQUYOU) and the EU (ZERCEPAC) marking a milestone in the internationalization of Chinese biosimilars

Abb: NCEs: New Chemical Entity; ADCs: Antibody Drug Conjugates; QoL: Quality of Life; FYP: Five Year Plan

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

The Rise of China Biotech Industry: Success Story (2/2)

2022-2024

- In **2023,** US FDA approved 3 new Chinese drugs - LOQTORZI (Toripalimab) is first US FDA-approved drug for nasopharyngeal cancer, FRUZAQLA (Fruquintinib) for metastatic CRC & RYZNEUTA Efbemalenograstim for the treatment of chemotherapy-associated neutropenia
- In **2024,** China achieved major milestones, becoming the world's second-largest market for new drug launches with an 18% share, while out-licensing deals surged to $50B - marking the industry shift from "Innovation 1.0" to a more sustainable, quality-driven "Innovation 2.0" with growing global recognition, including US & EU
- In 2024, HANQUYOU (Trastuzumab) entered the US market (with brand name HERCESSI), becoming the first China-developed mAb biosimilar approved in China, US & EU showcasing China biopharma global competitiveness

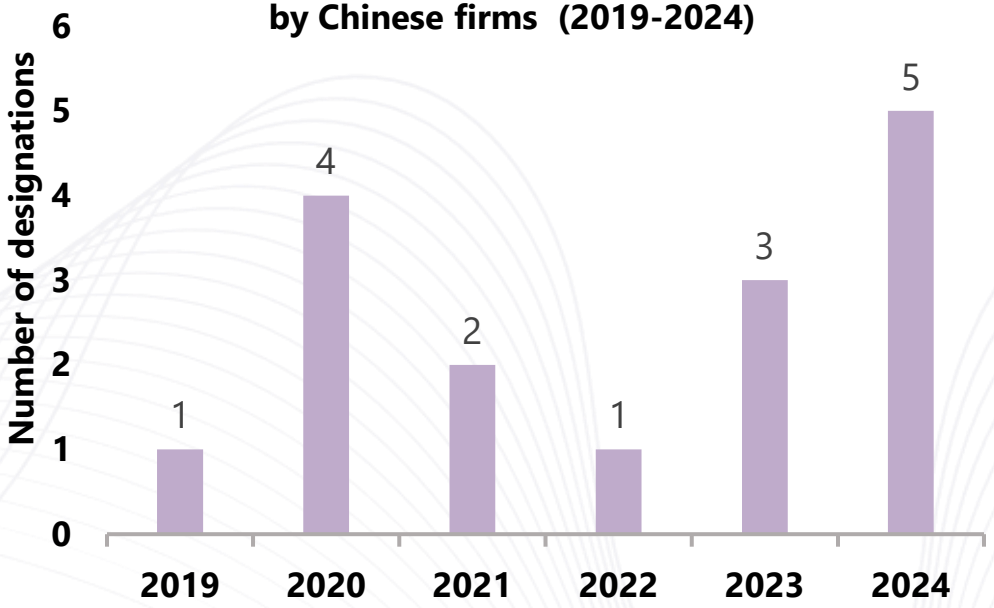

2025+

- As of **2025**, Policy on "Deepening Drug & Medical Device Regulatory Reform" - Promote exports of drugs & medical devices, join international inspection programs, simplify export certification for qualified manufacturers, and support global collaboration & overseas approval of high-quality traditional Chinese medicine
- In the first 8 months of **2025,** Chinese biotech completed 93 overseas out-licensing deals, highlighting their global reach including US & EU
- By **Aug 2025,** total out-licensing deal value is poised to set a record for the sixth consecutive year, at a combined total of $85B
- It is estimated that by **2040,** assets originating from China will represent 35% of US FDA approvals
- In the coming 5 yrs, 15th FYP (2026-2030), China policies will offer foreign companies to create opportunities in advanced manufacturing, high-tech, consumer markets, etc. but also bring stronger competition from innovative Chinese firms & stricter regulations focused on national goals

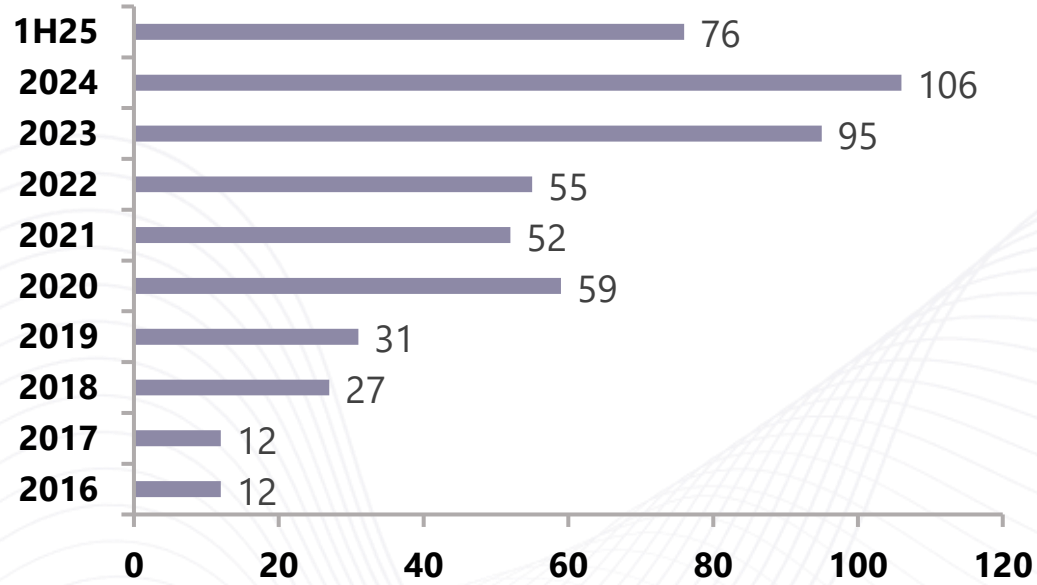

This presentation is non-exhaustive. For additional details or clarifications, please feel free to contact us at bd@octavusconsulting.com

Mapping China’s Biotech Acceleration

Number of FDA Breakthrough Therapy designations received by Chinese firms (2019-2024)

Number of China out-Licensing deal trends (2016 to 2025)

As innovative medicines from Mainland China continue to receive US FDA breakthrough therapy designations and feature prominently at major international medical conferences, the credibility of clinical data generated in Mainland China is steadily strengthening & earning broader global recognition

Recent years have seen a surge in high-profile deals, with global pharmaceutical companies (such as Merck, Pfizer & AstraZeneca) licensing China under development products for worldwide commercialization. The out-licensing wave began in 2023 with 74 deals worth up to $42.5B, followed by 64 deals valued up to $68.3B in the 1H’25

These partnerships give Chinese firms access to global distribution networks & regulatory expertise, while strengthening the credibility of their Chinese biotech innovations

INSIGHT CORNER

China Navigates Biotech Headwinds

Background:

- **Rising policy headwinds:** US and EU measures (BIOSECURE Act, IPI) are restricting Chinese biotech and medical device firms' access to procurement, data, and contracts on security and fairness grounds
- **China's response:** China has initiated selective retaliation, including limits on medical device imports and potential use of export controls or blacklisting mechanisms
- **Strategic long-term push:** Through Healthy China 2030, the 15th Five-Year Plan, and the Health Silk Road, China continues to promote biotech innovation, high-end manufacturing, and global health cooperation to expand international influence

US & EU Policy Headwinds

BIOSECURE Act:

- **Purpose:** Restricts foreign companies especially from China, to access US genomic data via biotech
- **Key Restrictions:** Prohibits procurement, grants, or contracts involving BCC (biotechnology companies of concern)
- **BCC criteria:** Foreign-controlled biotech firms risking US data security
- **Implementation:** Enacted on Dec 18, 2025, includes 5-year phase-out for pre-existing contracts on OMB's BCC list

Possible Retaliation from China:

- China may impose export restrictions on a limited set of pharmaceutical products to increase pressure on Western companies
- Blacklisting a U.S. pharmaceutical company that has minimal operations in China, as opposed to one that China's healthcare industry relies on

EU International Procurement Instrument (IPI) Measures:
The EU Commission is blocking Chinese medical device firms from public tenders due to unequal market access and fairness concerns

Retaliation from China:
China also blocked medical device imports from other countries if EU-made components exceed 50% of the contract value

China Expansion Policies

Health China 2030
Promotes China as a global health leader by sharing prevention models and technologies, shaping governance, and expanding health industry markets

15th five-year plan
Emphasizes innovation-led growth, industrial upgrades, self-reliance, openness, and competitive opportunities for foreign businesses

Health Silk Road
Promotes global health cooperation, infrastructure, and supplies while advancing China's medical and biotech influence

INSIGHT CORNER

Deal Insights

Last 5 years of US - China pharma dealmaking

01 Chinese biotech and pharma companies are increasingly out-licensing internationally to access global markets, secure capital amid domestic funding pressure, and validate rapid innovation, especially in oncology and ADCs

02 Since 2020, numerous out-licensing deals to the US and EU have spanned multiple therapy areas, though oncology remains the dominant focus with rising interest in immunology and metabolic disorders

03 China's ability to generate new drug candidates and advanced modalities (e.g., cancer therapies) is drawing global pharma majors that seek to diversify pipelines and future-proof their portfolios

04 Over the past two years, out-licensing has clearly expanded beyond oncology into immunology, metabolic disorders, and other areas, showing China can now drive innovation across multiple therapeutic segments

05 Deal-making peaked in 2021, then normalized in 2022–2023 and started to recover in 2024, suggesting a more stable post-COVID partnering environment for Chinese companies

06 D&C licensing structures dominate, reflecting shift away from pure service/CDMO work toward innovation-driven, asset-based partnerships from discovery through to approved products, with roughly 30% of deals still at early stages

07 Antibody-based oncology assets remain the core pillar, but technology is diversifying into ADCs, cell and gene therapy, RNA-based approaches, AI/ML-enabled platforms, and new indications such as obesity

08 Both out & in-licensing volumes have declined since 2021; however, out-licensing now consistently matches or slightly exceeds in-licensing (about -23% vs -26%), marking China's transition from technology importer to exporter

09 Chinese companies increasingly seek worldwide rights instead of China-only territories, reinforcing their global ambitions while preserving oncology as their primary strategic focus

10 Overall, China's biopharma sector is evolving toward broader, more sophisticated global partnerships, combining diversified modalities, multi-therapy innovation, and a stronger emphasis on exporting homegrown assets

INSIGHT CORNER

IPO Insights: From 2021 to 2025

Top 3 IPOs of China-based companies listed in developed markets such as the US and EU

Date	Company	Amount ($M)	No. of Shares	Price Per Share	Key Points
2/9/2021	HH&L Acquisition (SPAC)	414	41,400,000	10	Used a SPAC on NYSE to quickly raise a large amount of money in USD, showing how Chinese sponsors use US markets for speed and big fund-raising
9/12/2024	Zenas BioPharma	258.7	15,220,588	17	Late-stage autoimmune biotech listed on Nasdaq to pay for global P3 studies and launch plans, taking advantage of strong US interest in new biologic drugs
1/8/2021	Gracell Biotechnologies (AstraZeneca)	240.3	12,650,000	19	Oncology cell-therapy platform that listed early (preclinical/IND) reflecting that US investors are willing to fund high-risk Chinese innovation at strong valuations

- From 2021 to 2025, 14 China-based healthcare companies went public in the US with 13 choosing Nasdaq and just 1 listing on NYSE with a total IPO value of $1,620M highlighting a clear tilt toward growth
- Most of these listings are biopharma players targeting oncology, while only a small number in autoimmune, infectious, metabolic diseases or medical devices, highlighting that Chinese firms focused their innovative drug development efforts in oncology and using US markets to finance their development

Note: These are those companies who are listed outside China

Key Insights

- Chinese startups are increasingly listing in the US and other western markets because China's IPO rules are stricter, more subjective, and slower; and approvals can take 9–12 months, while markets like the US mainly apply clear, objective rules and approve listings faster, making overseas IPOs far more accessible for high-growth but early-stage firms
- Many strong Chinese companies choose foreign markets because they offer a simpler path to going public, especially for loss-making firms that are still unprofitable but growing fast. while China's profitability-focused IPO rules and rising geopolitical tensions are pushing issuers to diversify listing venues rather than retreat from global capital markets
- Chinese companies list in western market like the US and EU so they can reach more investors, raise more money, and make their brands better known around the world along with access to the US market
- SPACs are viewed as an effective way to accelerate expansion, and many Chinese startups prefer listing in the US through SPAC mergers because they typically expect higher valuations and find more such opportunities there
- US and other developed markets offer deep, liquid capital pools that allow companies especially fast-growing or pre-profit tech firms to raise large dollar-denominated funding rounds while gaining global investor visibility and a platform for international expansion

Dashboard

Chinese patents filed in US & EU, Jan'24–Dec'25

US

No. of Chinese Companies	Total patent filled
~175	~312

EU

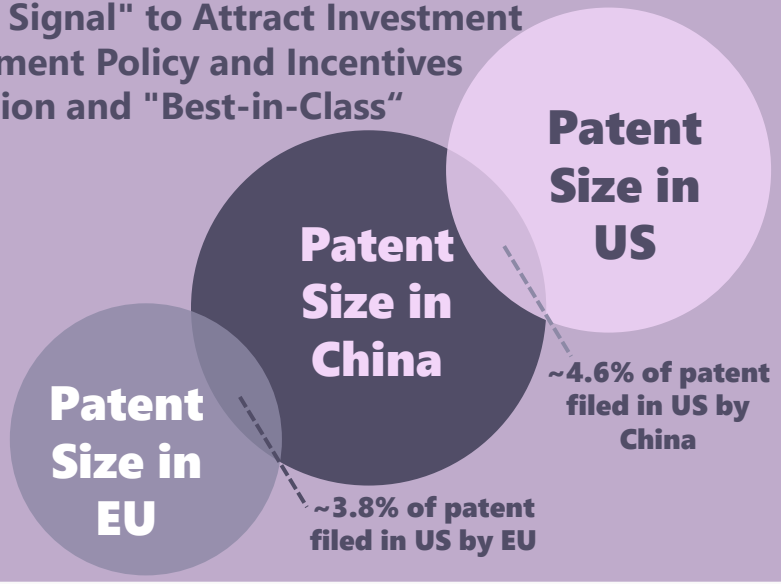

No. of Chinese Companies	Total patent filled
~86	~113

Beyond the Great Wall

The Reason#, Chinese Bio-tech/ Pharma File US and EU Patents...

1. Access to High-Value Markets
2. High-value oncology/ immunology R&D
3. Global Partnerships & Licensing
4. Building Global Credibility
5. Overcoming Domestic Constraints
6. Strategic Expansion
7. "Patent Signal" to Attract Investment
8. Government Policy and Incentives
9. Innovation and "Best-in-Class"

Source: Google Patent I #These are not the only reasons; we have captured some of the key reasons.

Key Outcome

- ✓ Chinese companies focus on US patents because US is main foreign IP battleground: it offers the largest single market, intense investor attention, strong enforcement and highest drug prices globally, so exclusivity there maximizes returns
- ✓ EU is the second pillar of this strategy: it is another large, profitable and regulated drug market where Chinese filings are growing fast, giving additional revenue and geographic diversification even if prices are generally lower than in the US
- ✓ Holding patents in both the US & EU lets companies resolve cross-border disputes through licensing or cross-licensing instead of cash payments which only works if each side owns valuable assets in the same key jurisdictions
- ✓ US and EPO examination standards for novelty, inventive step and disclosure are relatively demanding, so a granted US/EU patent acts as a signal that the technology is globally competitive and investment-grade, strengthening the company's credibility with partners, regulators and investors

Chinese Innovations Securing Elite Status in US and EU Markets (2021-2025)

ODD	FTD	BTD/ PRIME	Priority Review	RPDD
53	31	13	1	1

Key Insights

- ✓ Oncology represents ~69% designations making it the overwhelming focus of Chinese pharmaceutical innovation receiving global regulatory recognition
- ✓ Cancer-related indications, particularly lung cancer (NSCLC/SCLC) and lymphoma, account for the majority of these designations
- ✓ The FDA is by far the dominant regulatory body granting ~86% designations, followed by EMA
- ✓ BeOne Medicines secured highest 11 designations followed by others

INSIGHT CORNER

Shanghai Henlius Biotech: JPM 2026 Highlights

Octavus Insights

- Henlius growth strategy is driven by both biosimilars and innovative biologics
- Company has an accelerated international growth, and company is leveraging its expanding global commercialization network and fully integrated biologics capabilities to sustainably fund innovation through biosimilar cash flows while building a differentiated pipeline of next-generation immunotherapies

Strategic Focus

Henlius is implementing a "Globalisation 2.0" strategy focusing on transitioning from a biosimilar leader to an Innovative biopharma company by 2030 with emphasis on the US and EU markets

Henlius 2030 Vision: Global Biopharma

- **Market Expansion:** Henlius anticipates to launch over 20 products globally by 2030, prioritizing 15+ products in the US and EU
- **Revenue:** Overseas revenue is projected to surpass domestic revenue.
- **Modalities and TA:** Company has continued focus on portfolio expansion advancing innovative modalities such as ADCs, multi-specific antibodies and TCEs in oncology, autoimmune, neurology and metabolic diseases

R&D Highlights at JPM 2026

- **Serplulimab** is the lead growth driver, with expected China approval in perioperative GC and planned US filings in SCLC
  - Henlius highlighted perioperative regimen for GC met primary endpoints, securing China NMPA BTD and priority review as the **world's first to replace adjuvant chemo** and spare patients' post-op toxicity
- Henlius is confident in **HLX22** that boosts HER2 internalization by 40-80%, enabling high **safety profile** with reduced ILDs, Gr3 diarrhea and expecting prolonged PFS >20 months in 1L HER+GC
- Company is vigorously advancing multiple trials in solid tumors with **HLX43** aiming to establish it as a potential **best in class pan-tumor PD-L1 ADC** with **biomarker-independent**, broad-spectrum anti-tumor activity
- **HLX07** is expected to open up a **new 1L treatment pathway for EGFR overexpressing sqNSCLC** with encouraging mPFS of 17.4 months in P2 study
- **Preclinical:** Diversified pipeline with **50+** early-stage assets - ~70% best-in-class (BIC) and 15% as first-in-class (FIC)

Growth Outlook

- Over the next five years, Henlius expects to support investment in innovation through stable cash flows by its biosimilar portfolio. Company plants to launch **10 additional biosimilars and 5 innovative** products globally with definite double-digit growth expected in overall product value
- Henlius has built a platform-driven R&D ecosystem focused on **next gen IO's**, and includes multi-specific TCEs, Hanjugator™ ADC platform, HAI Club discovery platform which continues to produce differentiated innovative assets aiming to advance >40 INDs in next 5 years

2026 Clinical Milestones

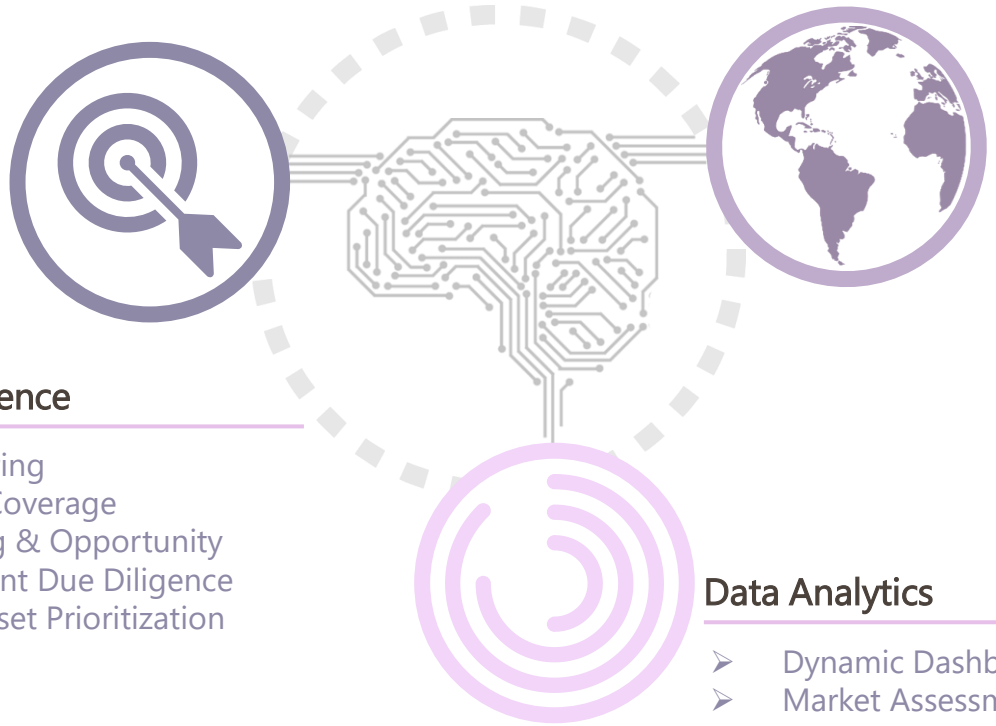

Molecule	Update	Milestone
Serplulimab (PD-1 mAb)	Regulatory	Expected accelerated approval for perioperative GC in Q2 2026 (CN)
	Regulatory	Anticipated approval for nsqNSCLC and sqNSCLC (EU)
	Regulatory	Planned BLA filing for ES-SCLC and LS-SCLC by Q4 2026 (US)
HLX22 (Novel epitope HER2 mAb)	Data Readout	P2 data readout for HER2-low BC in Q2 2026 (CN)
HLX43 (PD-L1 ADC)	Study Initiation	Global pivotal studies: 2L nsqNSCLC, ≥3L sqNSCLC, and 2L sqNSCLC
	Study Initiation	2 PoC trials in HR+ BC and TNBC by Q4 2026
	Publication	ASCO GI: ESCC; ASCO: NSCLC, NPC; ESMO: CC,OC
	Data Readout	Preliminary PoC data of HLX43 plus serplulimab ± HLX07 in NSCLC, SCLC, mCRC
HLX07 (EGFR mAb)	Study Initiation	Pivotal P2 trial in CSCC
	Study Initiation	Global multicentre P2/3 trial in 1L sqNSCLC

Abbreviations: GC: Gastric Cancer; BTD - Breakthrough Therapy Designation; nsqNSCLC: Non Squamous Non-small Cell Lung Cancer; ES-SCLC: Extensive-Stage Small-Cell Lung Cancer; LS-SCLC: Limited-Stage Small Cell Lung Cancer; BC: Breast Cancer; TNBC: Triple Negative Breast Cancer; ESCC: Esophageal Squamous Cell Carcinoma; NPC: Nasopharyngeal Carcinoma; OC: Ovarian Cancer; ASCO GI: American Society of Clinical Oncology Gastrointestinal, ESMO: European Society for Medical Oncology; ILDs: Interstitial Lung Diseases; TCE: T-cell engager; IO: Immuno-oncology; CN: China
