INSIGHTS CORNER

Animal Health

INSIGHTS CORNER

INTRODUCTION TO ANIMAL HEALTH

- Animal health is a dynamic field focused on ensuring the well-being, disease prevention, and treatment of both companion and livestock (food-producing) animals

- It encompasses a broad range of practices and products - including vaccines, pharmaceuticals, diagnostics, nutrition, and advanced technologies - to promote animal welfare, food safety, and sustainable agriculture

Preventive care

Preventing health problems is at the heart of animal care. Routine vaccinations, parasite prevention, and a balanced diet keep animals healthy from the start. Advanced diagnostics and attentive veterinary care then help quickly spot and treat any illnesses or injuries, ensuring ongoing well-being.

Healthcare

Animal health includes healthcare for both pets (dogs, cats, birds, and small mammals) and livestock (cattle, poultry, swine, sheep, and goats). It promotes responsible pet ownership, supports productive farming, and ensures a safe food supply.

Digital Technology

New technology is reshaping animal care by introducing telemedicine, wearable health monitors, and genetic testing tools. These innovations are making it much easier to keep an eye on animal health, deliver medical care remotely, and improve overall animal welfare through faster and more precise disease tracking.

Importance and impact of animal health:

- Maintaining strong animal health prevents the spread of zoonotic diseases, protecting public health and food safety worldwide
- Growth in the animal health sector is driven by increased pet ownership, the rising need for animal protein, and a greater focus on animal welfare and biosecurity measures

INSIGHTS CORNER

CATEGORY OF ANIMALS

Livestock & Companion Animals

- The industry is rapidly expanding because of greater demand for protein worldwide, as well as advancements in precision agriculture and smart technology
- Major developments include the use of AI for animal health management, improved feed strategies, and integrated data systems that boost efficiency and traceability
- Businesses are increasingly implementing IoT and cloud tools to monitor animal health, reduce environmental footprints, and meet food safety requirements

LIVESTOCK ANIMALS

- Livestock animals are domesticated animals raised in agricultural settings for the purpose of providing food, fiber, labor, and other products or services.
- These animals include cattle, sheep, goats, pigs, horses, donkeys, buffalo, and sometimes poultry like chickens, ducks, and turkeys.

COMPANION ANIMALS

- A companion animal is a domesticated pet such as a dog, cat, rabbit, bird, or other animal that is kept primarily for company, emotional support, and pleasure, rather than for work, food, or research.
- Companion animals usually live in people's homes, share close relationships with them, and are often considered family members. They provide psychological, social, and sometimes health benefits to humans, especially to those who live alone or need emotional comfort.

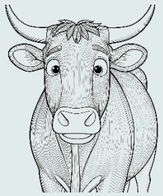

INSIGHTS CORNER

LIVESTOCK ANIMALS

Common Breeds in Livestock Animals

- Livestock breeding forms the backbone of the global agricultural economy, with select breeds playing major roles based on productivity, adaptability, and market demand.
- Popular breeds such as Holstein Friesian and Jersey cattle for dairy, Boer and Jamunapari goats for meat, Dorper sheep for rapid growth and quality meat, and commercial poultry varieties like broilers and Kuroiler chickens dominate the industry due to their high yield and profitability.
- The strategic selection of these breeds ensures efficient resource utilization and steady returns, positioning them as preferred choices for both large-scale and smallholder livestock enterprises worldwide.

CATTLE

- Holstein & Jersey: Dairy
- Hereford & Angus (Aberdeen Angus): Beef

GOAT

- Boer & Jamunapari: Meat
- Saanen & Nubian: Dairy
- Angora & Cashmere: Fiber

PIG

- Yorkshire & Duroc: Pork
- Berkshire & Hampshire: Pork

SHEEP

- Merino: Wool
- Suffolk & Dorper: Meat
- Dorset: Dairy, Meat & Wool

POULTRY (CHICKEN)

- White Leghorn: White Egg
- Rhode Island Red: Brown Egg & Meat
- Cornish: Meat

INSIGHTS CORNER

LIVESTOCK ANIMALS

Top Diseases By Economic Impact

1. SUBCLINICAL KETOSIS

- A metabolic disorder, often undetected, leading to reduced milk yield, increased risk of other diseases, and fertility issues
- Annual global losses are estimated at $18 B per cow losses costs are estimated at $78 per case

2. CLINICAL MASTITIS

- Acute infection of the udder causing milk loss, treatment costs, and culling
- Global losses approach $13 B; significantly affects dairy cows' health and the dairy industry, leading to economic losses estimated between €16-26 B annually

3. SUBCLINICAL MASTITIS

- Chronic form with no visible symptoms but leads to sustained lower milk yields and quality
- Estimated $9 B global annual loss; three to fivefold higher production losses compared to clinical mastitis, and losses of 10–20% per cow's lactation

4. LAMENESS

- Mainly caused by foot disorders, reduces milk output, fertility, and increases culling
- Annual cost is about $6 B globally; for a single cow, losses are about €307–€800, representing a major hit to farm profitability (up to 17% reduction for affected herds)

5. METRITIS

- Uterine infection after calving; lowers milk yield, impairs reproduction, and increases culling
- According to a 2024 report, the global annual impact on herds is estimated at 5 B

TOP 10 LIVESTOCK DISEASES BY ECONOMIC IMPACT

6. PARATUBERCULOSIS

- Chronic intestinal infection, causes weight loss, diarrhea, poor milk yield, and premature culling
- Estimated global losses are $4 B; regionally, US herds lose about $33 per cow per year, totaling $198 M annually nationwide

7. OVARIAN CYSTS

- Reproductive disorder that delays conception, increases culling, and reduces calving rates
- Annual global economic loss is about $4 B

8. RETAINED PLACENTA

- Retention of fetal membranes post calving, predisposing cows to infections, reduced fertility, and increased culling
- Total annual global losses at about $3 B

9. DISPLACED ABOMASUM

- The cow's stomach moves from its normal position, impairing digestion, reducing milk yield, and causing increased vet costs and culling
- Annual global financial loss is about $0.6 B

10. MILK FEVER

- Calcium deficiency post calving, causing weakness and even death; lowers milk production and fertility, requiring intensive treatment
- Worldwide annual loss is approximately $0.6 B; per cow, the loss may be Rs 346 (India) or higher depending on management

Grooming & Smart Health Monitoring Devices

GROOMING

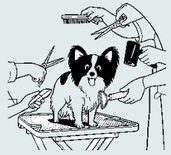

The pet grooming market is projected to grow substantially in 2025, driven by rising pet ownership, the humanization of pets, and greater consumer focus on animal health and wellness. This shift has led to increased demand for professional grooming services and innovative products.

Brushing & Combing

Teeth Brushing

Haircut & Trimming

Bathing

Nail Trimming

Ear Cleaning

SMART HEALTH MONITORING DEVICES

Pet health monitoring devices have evolved into a connected ecosystem utilizing AI and miniaturized sensors for real-time health insights. They monitor vital signs, detect illness early, and offer personalized nutrition and fitness recommendations via an intuitive dashboard. This market growth is attributed to the desire for proactive care and an increasing variety of solutions tailored to specific species and health requirements.

GPS Collar

INSIGHTS CORNER

COMPANION ANIMALS

Benefits of Animal Assisted Activities

Animal-assisted activities (AAA) involve the use of trained animals in informal recreational and visitation programs designed to assist individuals with special needs. These programs aim to provide motivational, educational, or recreational benefits, thereby enhancing the quality of life for participants. AAA programs can be implemented in diverse settings, including hospitals, schools, and long-term care centers.

1

CARDIOVASCULAR HEALTH

- Engagement with companion animals, such as petting a dog or cat, has been demonstrated to induce reductions in both blood pressure and heart rate, leading to decreased cardiovascular strain. These physiological effects are associated with a diminished risk of developing cardiovascular diseases and related health conditions.

2

STRESS REDUCTION

- Animal-assisted activities (AAA) are effective in lowering stress and anxiety levels. The interaction with a gentle animal can facilitate the release of oxytocin, a hormone linked with emotional bonding and relaxation, which in turn helps relieve symptoms associated with stress.

3

SOCIAL AND BEHAVIOURAL BENEFIT

- Animal-assisted activities enhance social interaction, promote better communication, and increase engagement in group settings, particularly benefiting children and older adults. These activities help lift mood, reduce loneliness, and support active participation in social and educational environments.

4

COGNITIVE BENEFITS

- Animal-assisted activities stimulate cognitive function and emotional well-being in individuals with dementia or Alzheimer's disease. These interactions can enhance memory, attention, and problem-solving abilities, while also provide comfort and reduce agitation.

5

IMPROVED PHYSICAL ACTIVITY

- Including animals in therapeutic activities promotes physical movement, such as walking or playing, which helps improve physical fitness and can assist in managing issues like obesity and joint stiffness.

Top Diseases By Economic Impact: 2024

TOP 5 DOG DISEASES BY ECONOMIC IMPACT

1. GROWTHS & TUMORS	2. GASTRITIS	3. EYE CONDITIONS	4. LIVER DISEASE	5. SEIZURES
Cost: $300–$10,000 (can be cancerous). Symptoms are lumps, swelling, sores, odors; treatment involves biopsies, surgery, chemotherapy, and drainage.	Cost: $1,600–$5,000. Caused by inflammation, ingestion of toxic substances, or infections; symptoms are vomiting, diarrhea, anorexia, and lethargy; treatments include lab tests, imaging, surgery, antibiotics, and special diets.	Cost: $1,100–$5,000. Includes infections, injuries, glaucoma, cataracts, and dry eye; symptoms are redness, discharge, blindness, squinting; diagnostics and treatments include tear tests, eye drops, surgery, and antibiotics.	Cost: $400–$5,000. Can be congenital, infectious, or due to trauma; symptoms are jaundice, seizures, vomiting, and blindness; treatment includes surgery, liver protectants, antibiotics.	Cost: $200–$5,000. Causes include epilepsy, stroke, brain cancer, or metabolic issues; symptoms are collapsing, convulsions, drooling, loss of consciousness; diagnosis and treatment include bloodwork, MRI, anticonvulsant drugs, surgery.

TOP 5 CAT DISEASES BY ECONOMIC IMPACT

1. CANCER	2. SKIN CONDITIONS	3. EYE CONDITIONS	4. INFECTIONS	5. GASTRITIS
Cost: $3,000–$5,000; can occur throughout body, difficult to detect early; symptoms are lumps, appetite loss, difficulty urinating, odors, sores; diagnostics are MRI/CT scan, cytology, biopsy; treatments are chemotherapy, radiation, surgery.	Cost: $200–$2,500; includes infections, parasites, allergies; symptoms are itching, flaky skin, hair loss; diagnostics include cultures, biopsies, allergy tests; treatments are antibiotics, medicated shampoos, creams.	Cost: $700–$2,000; conditions include conjunctivitis, ulcers, retinal damage; symptoms are blindness, redness, discharge, squinting, itchiness; treatments are antibiotics, drops, surgery.	(Fungal, Bacterial, Parasitic): Cost: $300–$2,000; can involve skin, organs, eyes; symptoms are fever, appetite loss, lesions, pain, coughing, vomiting; diagnostics include blood panels, skin biopsies, surgery, antibiotics, pain meds.	Cost: $1,500–$1,800; caused by inflammation, toxins, parasites, infections, cancer; symptoms include vomiting, diarrhea, weight loss, constipation; treatments are lab tests, surgery, antibiotics, probiotics.

INSIGHTS CORNER

EMERGING TECHNOLOGIES IN ANIMAL HEALTH

How Technology Helps?

Artificial Intelligence

- AI tools in veterinary care can rapidly analyze diagnostic images, health records, and behavioral data to detect diseases early and provide accurate diagnoses
- The algorithms help predict health risks before they occur, enabling proactive care and better herd management

Blockchain and Big Data

- Blockchain ensures secure, transparent records of animal health, treatments, and food supply chains, supporting safety and compliance
- Big data analytics reveal trends, disease patterns, and management strategies for improved animal health and productivity

Wearable Digital Devices

- Continuous monitoring of vital signs, activity, temperature, and environment with real-time health alerts
- Used for pets and livestock to enable targeted treatment and boost productivity in large-scale operations

Robotics & Smart Facility Design

- Robotics and drones automate tasks like milking, monitoring, medication delivery, and barn management
- Smart facility design with robotics and sensors enhances care, reduces infection risks and maintains controlled environments

Genomics & Personalized Care

- Genetic testing enable personalized care, optimized nutrition, breeding, and disease prevention based on individual profiles
- Sequencing and molecular diagnostics enable early detection and targeted treatments.

Advanced Diagnostics

- Portable and AI-driven devices provide rapid, low-cost, and accurate diagnosis from small samples in field or farm settings
- Point-of-care tools deliver lab-level precision, enabling timely treatment and effective outbreak control

Telemedicine & Digital Health

- Virtual consultations improve access, reduce stress provide care for remote or exotic species through live video and remote diagnostics
- Telemedicine tools expand veterinary expertise access, streamline care with apps and cloud records, and offer convenience and cost savings

INSIGHTS CORNER

DIGITAL ANIMAL HEALTH

INTRODUCTION

The use of digital technologies in animal health refers to the integration of advanced tools, such as artificial intelligence (AI), telemedicine, wearable devices, and electronic health records, to monitor, diagnose, and improve the well-being of animals. This approach aims to enhance the accuracy of health assessments, enable remote consultations, and support personalized treatment plans for individual animals through real-time data collection and advanced analytics. Digital animal health technologies are transforming veterinary medicine by providing veterinarians and pet owners with unprecedented convenience, accessibility, and efficiency in animal care.

Technologies In Digital Animal Health

1. **WEARABLE TECHNOLOGY**
   Smart collars, ear tags, and implantable chips monitor animal health indicators like activity, heart rate, and temperature for early illness detection, enhancing care for pets and livestock.
2. **TELEVET SERVICES**
   Telemedicine allows remote consultations via video calls, assisting veterinarians in diagnosing minor issues, especially beneficial for rural clients.
3. **AI & MACHINE LEARNING**
   These technologies predict disease outbreaks and analyze diagnostic data, facilitating faster health problem detection and improved herd management.
4. **MOBILE APPS**
   Applications aid in tracking health records, scheduling vaccinations, and monitoring diets, enhancing communication between caregivers and veterinarians for better preventive care.
5. **BLOCKCHAIN**
   Utilized for securely storing and tracing health records and supply chains, ensuring data accuracy, enhancing traceability, and supporting food safety and regulatory compliance.

INSIGHTS CORNER

DIGITAL ANIMAL HEALTH

BENEFITS OF DIGITAL HEALTH IN ANIMALS

Digital health technologies for animals offer numerous benefits, including early disease detection, improved productivity, reduced antibiotic use, and enhanced pet-owner engagement.

1

EARLY DISEASE DETECTION

Digital monitoring tools allow for real-time health tracking of animals, helping to identify illnesses at the earliest stage. This results in timely interventions, reducing mortality rates and improving overall animal welfare.

2

IMPROVED PRODUCTIVITY

Technologies such as wearables and precision farming systems help optimize feeding, breeding, and general care, leading to higher dairy yields and better meat quality. Automation of routine tasks also increases efficiency on farms.

3

REDUCED ANTIBIOTIC USE

Digital health solutions promote targeted and preventive care, minimizing the overuse of antibiotics by catching diseases before they spread. This supports the One Health approach, which links human, animal, and environmental health by reducing risks of antimicrobial resistance.

4

BETTER PET-OWNER ENGAGEMENT

For companion animals, digital tools such as health tracking apps and telemedicine platforms encourage proactive participation by pet owners in their pets' well-being. This leads to tailored care, better communication with veterinarians, and improved long-term health outcomes.

CHALLENGES

The key challenges in adopting digital health technologies for animals include:

HIGH COST OF DEVICES:

The initial investment and ongoing operational costs for digital tools can be prohibitive, especially for small farms, rural areas, or low-income settings

INTERNET/CONNECTIVITY ISSUES:

Many rural areas where livestock farming occurs lack reliable broadband or network infrastructure, limiting the deployment of digital monitoring and telemedicine

DATA PRIVACY:

Animal health data is linked to human owners, raising privacy concerns. Regulations developed primarily for human health data may complicate the use and sharing of animal health information

TRAINING AND USER ADOPTION:

Farmers, veterinarians, and other stakeholders often require training to effectively use digital tools. Resistance to change and lack of technical knowledge can prevent widespread adoption.

INSIGHTS CORNER

ANIMAL HEALTH POLICY: 2025

US ANIMAL HEALTH POLICY: 2025

8th JAN

NARMS STRATEGIC PLAN FOR 2026-2030

The FDA has requested public comments to assist in creating the National Antimicrobial Resistance Monitoring System (NARMS) Strategic Plan for 2026-2030, which monitors antimicrobial resistance trends in intestinal bacteria from humans, retail meats, and food animals.

15th JAN

FDA ON CANNABIS-DERIVED PRODUCTS

The US FDA's Center for Veterinary Medicine has issued a request for information (RFI) seeking public comments, especially from veterinarians, regarding cannabis-derived products (CDP), focusing on cannabidiol (CBD) and hemp-derived items

17th JAN

H5N1 PET FOOD SAFETY

The US FDA mandates that manufacturers of cat and dog food using uncooked or unpasteurized materials from poultry or cattle reanalyze their food safety plans to include Highly Pathogenic Avian Influenza virus (H5N1) as a recognized hazard.

18th FEB

No IRIS Act (H.R.1415/S.623)

The No IRIS Act (H.R.1415/S.623), backed by the American Feed Industry Association, seeks to ensure that EPA regulations affecting animal feed and health are based on peer-reviewed, sound science - not IRIS assessments, which have faced criticism for lacking transparency and scientific rigor. This approach aims to prevent unnecessary regulatory burdens on safe feed ingredients, thereby supporting animal health and safety.

10th MAR

AMERICAN AGRICULTURE ACT (H.R. 1195/ S. 912)

The US animal agriculture industry heavily relies on China for over 70% of the world's vitamins & key amino acids, which poses risks to animal health, nutrition, & food security due to potential supply disruptions. To mitigate this dependency, the American Feed Industry Association recommends increasing domestic manufacturing and diversifying suppliers to maintain a consistent supply of essential nutrients.

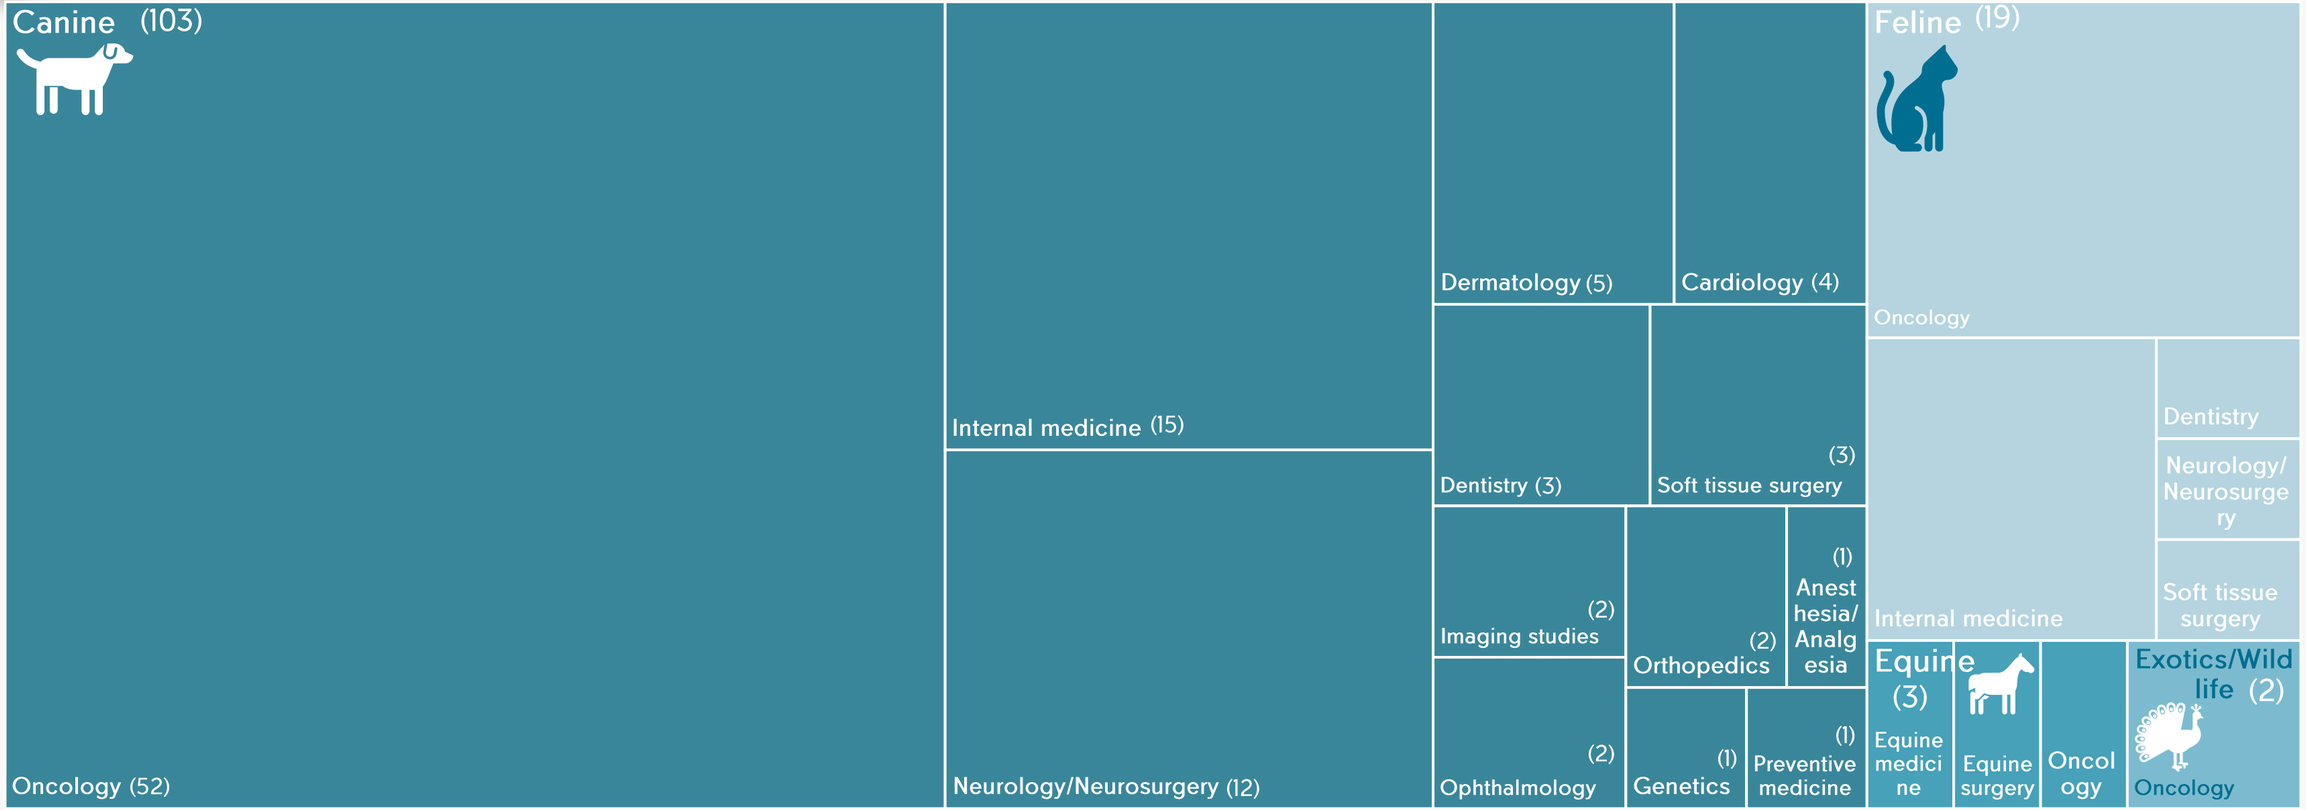

18th MAR

INNOVATIVE FEED ACT (H.R.2203/S.1906)

The Innovative FEED Act (H.R.2203/S.1906) aims to modernize the U.S. FDA's process for approving new animal food ingredients by creating a regulatory path for non-nutritive feed additives that improve animal health, food safety, or environmental impact.

INSIGHTS CORNER

VETERINARY CLINICAL TRIALS

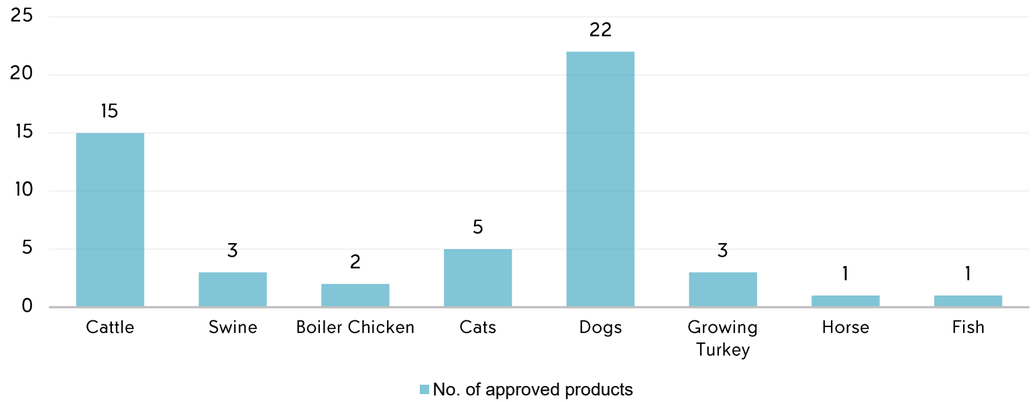

- Canine dominates other species as highest activity or volume in veterinary medicine specialties. Majority of trials are focused on dogs
- Cats make up the next largest section, with oncology being especially prominent, followed by internal medicine and dentistry. This suggests that research on cancer and chronic conditions in felines is a major area of interest
- Across all species, oncology appears to be the dominant specialty in clinical trials, which underscores the importance placed on cancer research in veterinary medicine and likely reflecting broader trends in veterinary disease prevalence and funding priorities

NexGard®
FLEA & TICK PROTECTION NEVER TASTED SO GOOD

About Product

NexGard® (afoxolaner) is offered as a beef-flavored, soft chewable medication for dogs and puppies, available in four different sizes tailored for oral administration based on the weight of the animal.

Dose & Frequency

NexGard® is indicated for dogs and puppies 8 weeks and older, weighing at least 4 pounds, for the treatment and prevention of adult flea infestations (Ctenocephalides felis) and various tick infestations including Ixodes scapularis, Dermacentor variabilis, Amblyomma americanum, Rhipicephalus sanguineus, and Haemaphysalis longicornis. It also prevents Borrelia burgdorferi infections by killing Ixodes scapularis ticks, providing protection for one month.

Approved Indications

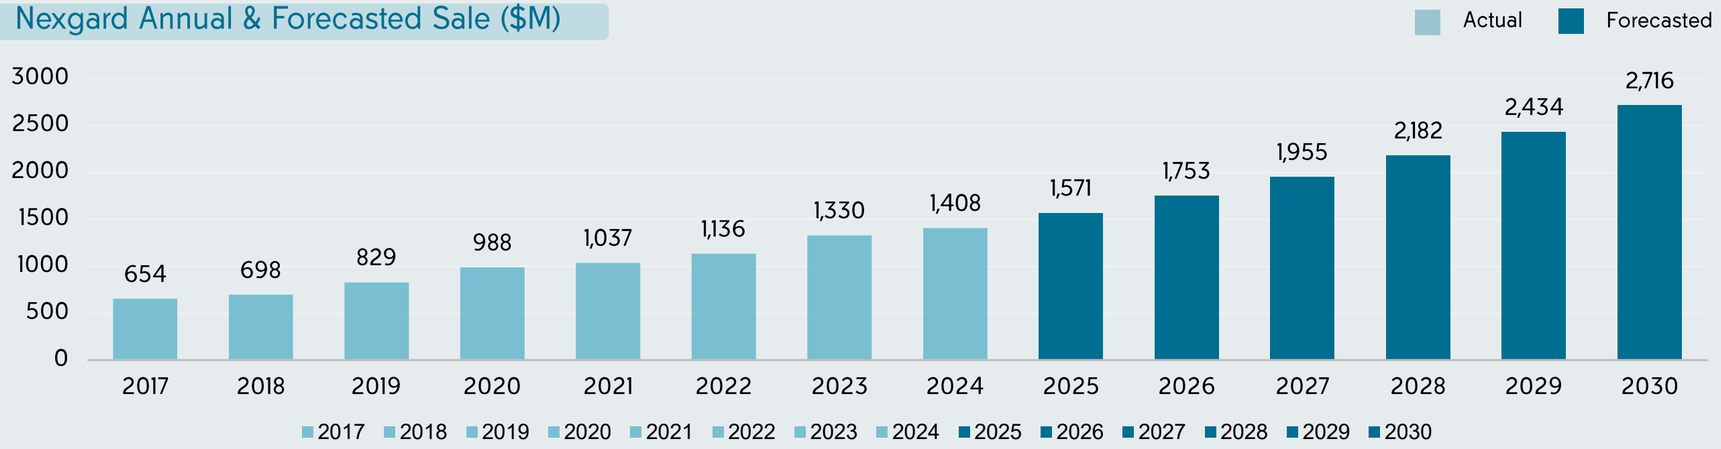

NexGard® is given orally OD in a mos, at the minimum dosage of 1.14 mg/lb (2.5 mg/kg).

DEALS IN ANIMAL HEALTH

RECENT DEALS IN ANIMAL HEALTH - 2025

11th SEP

Terravet Real Estate Solutions acquired Eastern Animal Hospital property

Terravet Real Estate Solutions has **acquired** the Eastern Animal Hospital property in Baltimore for $7.75 million. The 16,433-square-foot, purpose-built facility houses a top general practice veterinary clinic offering services such as emergency care, dentistry, diagnostics, and behavioral medicine. The acquisition adds to Terravet's growing REIT portfolio, now comprising over 1.5 million square feet of veterinary real estate across more than 35 states.

29th SEP

Four Corners Property Trust (FCPT) acquired VCA Animal Hospital property

Four Corners Property Trust (FCPT) has **acquired** a VCA Animal Hospital property in New Jersey for $3.4 million. The property is corporately operated and under a net lease, with around eight years remaining on the lease term. The acquisition was completed at a 7.1% capitalization rate based on rent at closing, not including transaction costs.

20th AUG

Zomedica and VerticalVet has sign partnership

Zomedica and VerticalVet have formed a two-year **partnership** that makes Zomedica a preferred provider of advanced veterinary technologies—such as shock wave therapy, contactless monitoring, tPEMF therapy, and bleeding control solutions—to over 2,600 independent veterinary practices in the VerticalVet network across the U.S.

28th AUG

Terravet Acquired Oakdale Veterinary Group's

Terravet Real Estate Solutions has completed **acquisition** of Oakdale Veterinary Group's advanced, purpose-built facility in Oakdale, California's Central Valley in $6M.

01th OCT

ScribbleVet and Vetology has sign partnership

ScribbleVet and Vetology have introduced a new integration for veterinary practices, automating the transfer of patient details from ScribbleVet's SOAP records to Vetology's teleradiology forms to reduce manual data entry, errors, and staff workload. This **partnership** allows veterinarians to submit accurate, complete radiology referrals with one click, increases efficiency, and frees up more time for patient care. The integration is now available for clinics using both platforms.

INSIGHTS CORNER

MARKET SIZE

Global Market Estimation ($B)

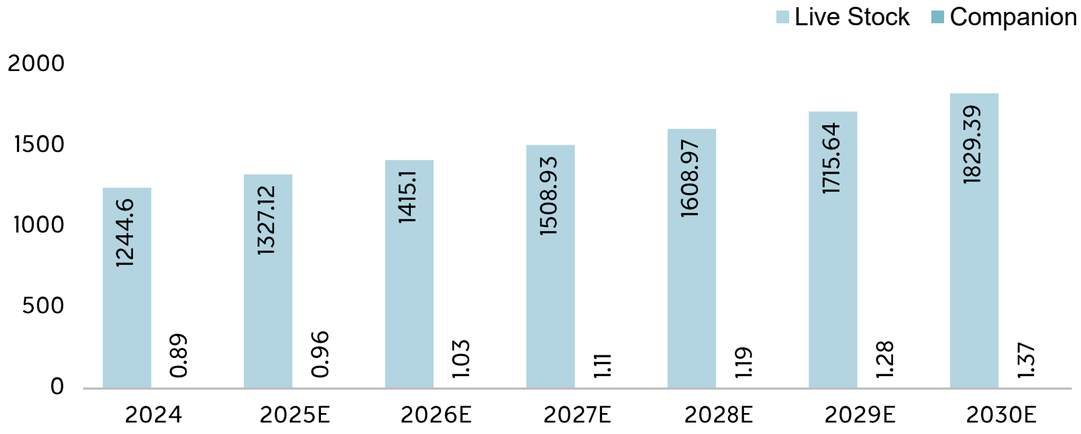

Market Share Distribution (As per 2024)

- USA leads the animal health market because of high investment in veterinary care, well-developed infrastructure, and strong innovation from its pharmaceutical industry
- India, while having the largest population of livestock, accounts for only a small market share (3.1%) due to lower spending per animal and gaps in access to modern animal healthcare, especially in rural regions
- Widespread pet ownership, technology adoption, and robust government support drive animal health spending higher in the USA compared to India

Indian Animal Health ($B)

- Livestock are deeply woven into India's way of life, supporting farming, local economies, tradition, and village life, which makes them a central part of society
- There are far more livestock in India over 535 million, while pets like dogs and cats are fewer and mostly found in cities
- Among livestock, cattle are especially important, with more than 300 million across the country, and they play a key role in supporting families and communities
- The market for pet health in India is growing, valued at about $895.6M in 2024, and expected to rise as more people welcome pets into their homes and look out for their health
- More people in cities are buying pet food, seeking healthcare, and using grooming services for their pets, reflecting changing attitudes and a growing demand
- Because livestock are essential for rural life and the economy, the livestock market in India is much bigger than the market for pets, whose value comes mainly from companionship

Leadership Team

Our team comprises seasoned professionals and emerging talent with diverse expertise in life sciences and healthcare, blending years of industry experience with fresh perspectives to drive innovative solutions and comprehensive insights for our clients.
